Palestine Technical University -

Course's Name:
Advanced Topics in Databases

Course's Number: 12140526
Total Mark: 15

Third Assignment

Student's Name: _____
Student's Number: _____
Section's Number: _____

Suppose we want to create a **products collection** in MongoDB. Each document represents a product. The collection contains the following sample document:

{ id: 1, name: "Laptop", price: 1200, category: "Electronics" }

Write MongoDB queries to achieve the following:

- Insert four new products using **one query**
- Increase the price of all products in the category **"Electronics"** by 200
- List all products whose price is in the range **[1000, 2000)**
- The product "Laptop" has been updated to category **"Electronics and Computing"**, write the proper query to modify its information
- Assuming that a product with id = 20 does not exist, add a new document with the following data **without using insert query**:
  id = 20, name = "Tablet", price = 800, category = "Mobile Devices"

Instructions

- This assignment may be completed in groups of **up to two students**.
- Each group must submit **one answer only**, including the **names of all group members**.
- The answer should be written **clearly and completely**.
- **Upload** the answer as an **Online text**.
